

TruCard™

The Industry's Premier Automated Multi-Dose Blister Card Packager with Verification Built into the Machine

Why Choose TruCard?

Accuracy

- Inspection technology uses a medication algorithm to verify medication based on quantity, pill size, shape, and color
- Guided electronic verification flags all suspect medications for additional checks to decrease filling errors and increase production
- RFID tracking of all canisters, exception trays, and blister cards

Workflow

- Medication formulary managed through RFID-smart canister technology
- Guided prefill station with fill-to-light technology to reduce filling time and errors for all non- canister medications and canister refills
- Customized patient label designs and multiple styles of blister card options

Efficiency

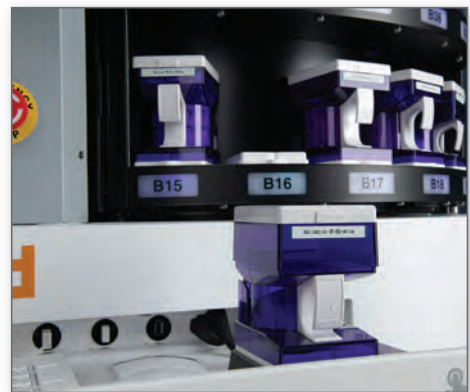

- Easy-to-use software for complete control of the packaging process
- Can produce up to 35 fully filled and verified multi-dose blister cards per hour
- Ability to swap canisters without interrupting production to reduce manual exception fills
- Reduced pharmacy check time by up to 70% with guided inspection

The Industry's Premier Automated Blister Card Packager with Built-In Verification

Built-In Verification

Reduced pharmacist check time with guided inspection.

RFID-Smart Canisters

Unlimited formulary with hot swappable canisters.

Prefill Tray & Canister Station

Enhanced workflow with guided prefill station for all non-canister medications and canister refills.

200 Onboard RFID-Smart Canisters

Controlled & Trackable Process

All canisters, exception trays, and blister cards are tracked by RFID to ensure patient safety.

Variable Blister Styles

Ability to use multiple blister card styles and label designs to fit your unique needs.

Dual Lighted Exception Trays

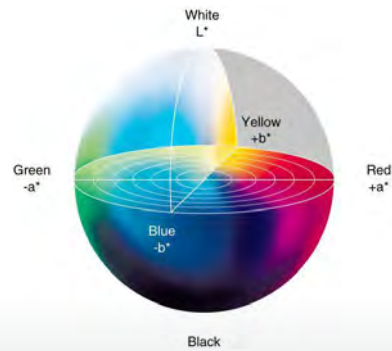

Dual tray technology allows for increased production while maintaining image verification of non-canister medications.

Ensure Patient Safety with Guided Fill and Built-In Verification

Accurate Pill Programming

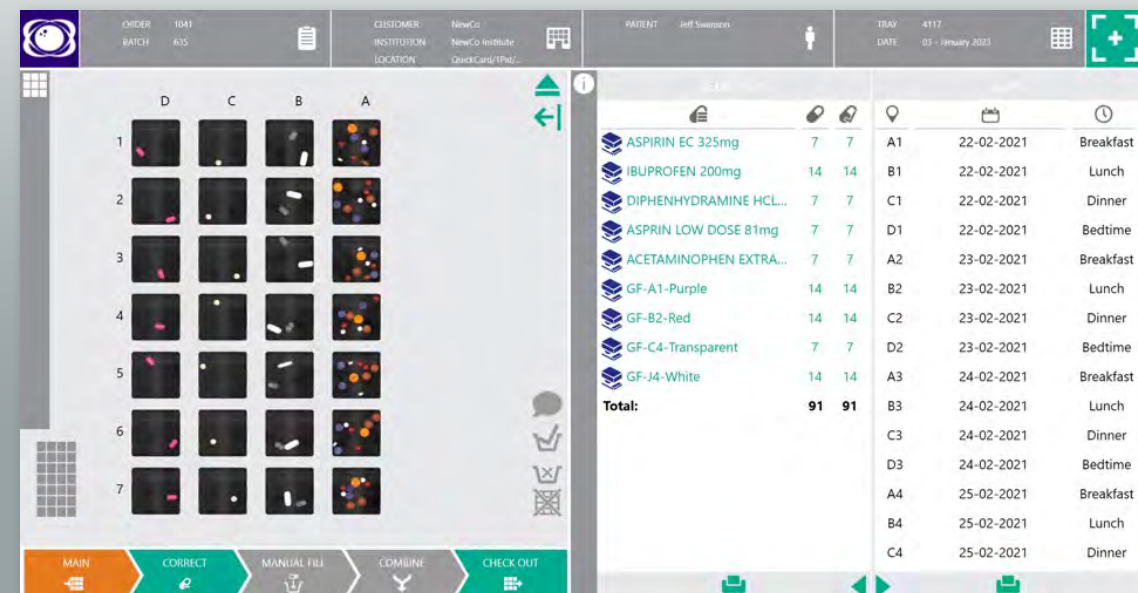

External vision stations provide pharmacies with a user-friendly and efficient solution to add new and update changed medications.

Medication Verification Based on Multiple Criteria

TruCard uses length, width, shape, quantity, and color — including hue and brightness — in its algorithm to verify medication dispensed through the device.

Guided Electronic Verification

Reduced Pharmacist Check Time and Enhanced Workflow

- Easily identifies patterns
- Flags all suspect medications for additional checks
- Lists all expected medications with reference images
- Stores images for future reference

Decrease Filling Errors and Increase Production with Guided Prefill Station

- 1 On-screen guide with medication information
- 2 Barcode scanner for medication verification
- 3 RFID technology to ensure correct tray is used for the correct batch and patient
- 4 Fill-to-light technology to reduce filling time and errors
- 5 Canister base for easy refilling and prefilling of medication canisters

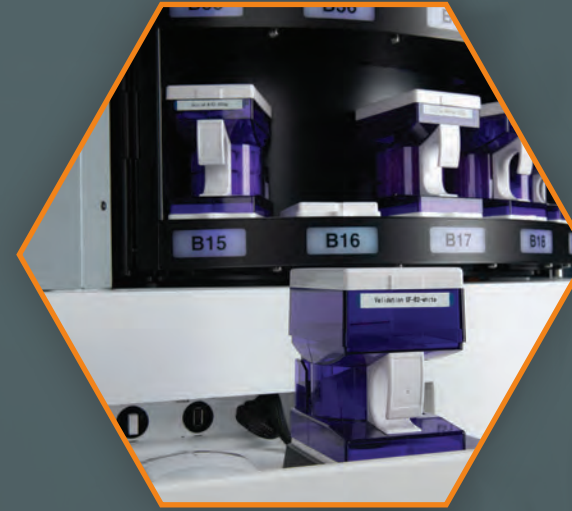

Efficient Workflow to Track and Control the Entire Process

Prefill exception medication with fill-to-light technology.

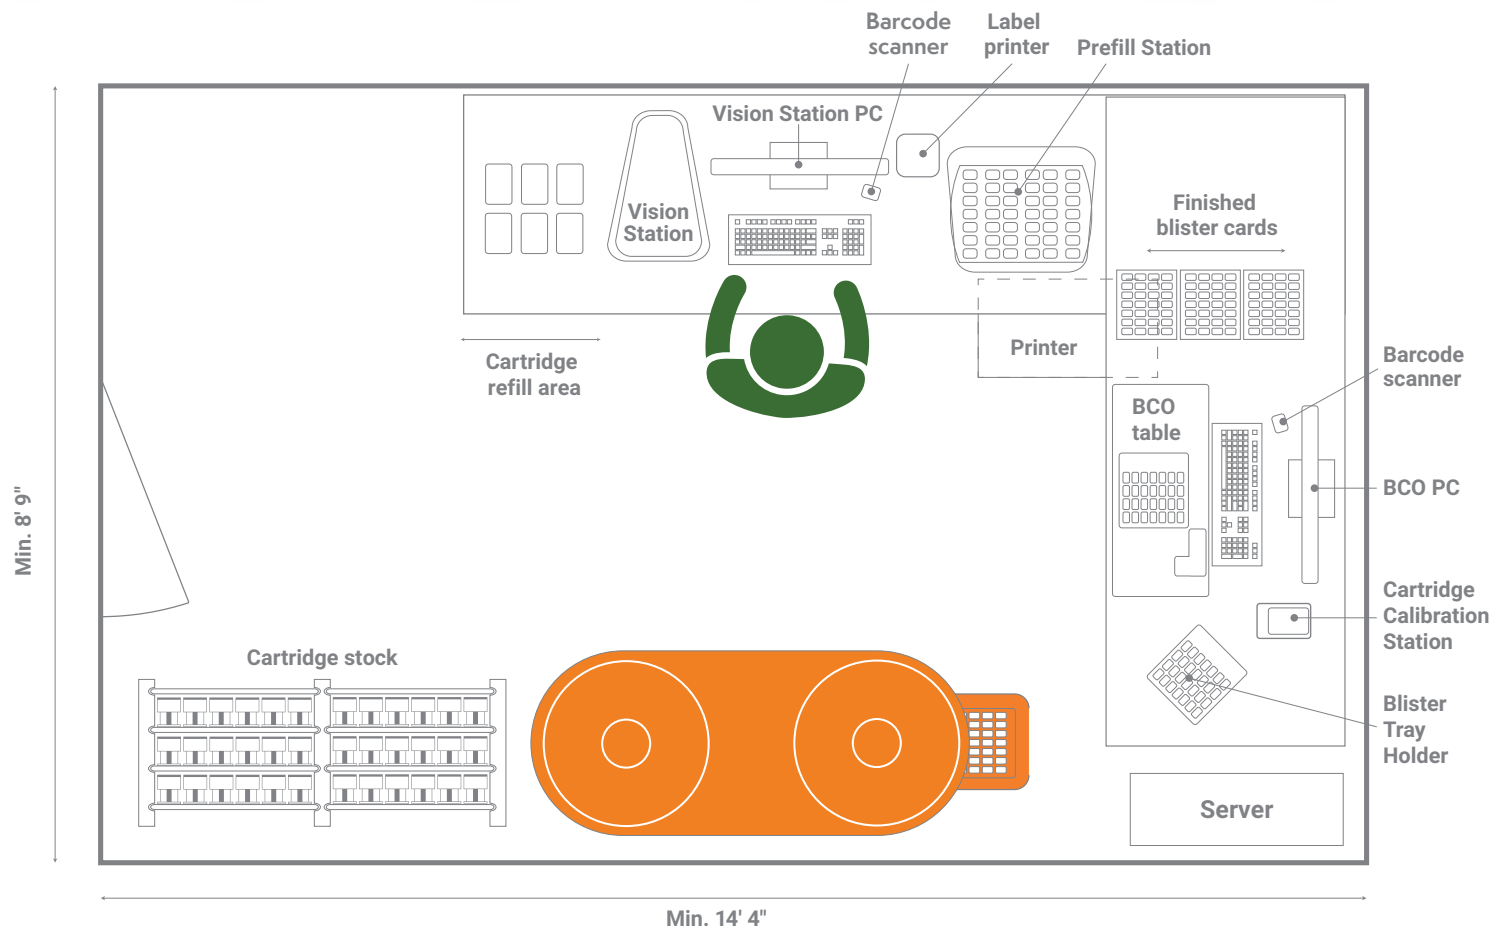

RFID-driven blister trays to track production and ensure patient safety.

Unlimited formulary with RFID canisters that allow for hot swapping and rebalancing.

Built-in inspection decreases pharmacist check time and allows for PV2 exemption status.

TruCard Specifications

Measurements	6'5" (w) x 2'9" (d) x 6'7" (h)
Required Footprint	8'3" (w) x 4'11" (d)
Weight	1,400 lbs
Power Supply/Frequency	110 VAC/50-60Hz
Network Requirements	1 Gbps minimum network connection

Flexible Design Allows You to Choose the Blister Card that Best Fits Your Operation

A Focus on Medication Adherence

The TruCard uses multiple card styles to package patient medication in an easy and ready to use format. Organizing medications and clearly labeling them helps to improve patients' overall medication adherence.

Weekly card

Hanging Style
Weekly card with four pass times

Best-in-Class Service and Support

Collaborative Partnership

First and foremost, we are dedicated to being your partner. This begins with our consultative onboarding process. We work closely with your team to develop the correct interface, create labels, analyze your formulary, and review your workflow to optimize your operations.

Dedicated Onboarding Process

JFCRx provides a dedicated project manager throughout the onboarding process to ensure your training and go live experience exceeds your expectations. Our Implementation Team works with your staff to ensure a seamless transition to the new system with as minimal impact to operations as possible.

Hardware and Software Training

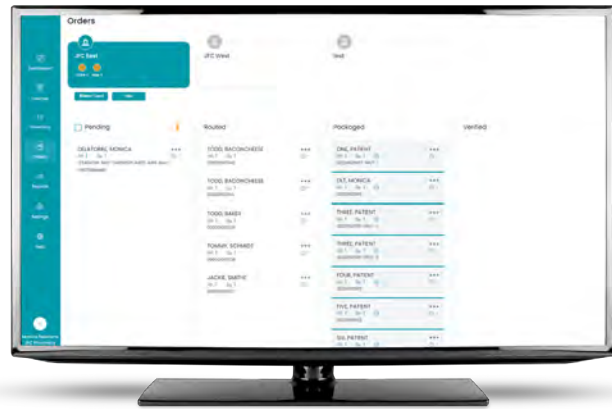

With JFCRx, you can choose from amongst onsite and remote training opportunities. Our project management and Implementation Team ensures that your team receives robust training for your new devices and associated software. Help videos and support documents are available through the Enlite™ Management System to augment your team's ongoing support and training needs.

Customer Service and Support

JFCRx offers a 24/7 call center for service and support. We understand that the performance of your device is vital for the success of your operation. JFCRx has a nationwide network of trained and certified field service representatives who are available to support your devices onsite to maximize the uptime of your pharmacy's operations.

Achieve Enterprise-Level Control and Analytics with the EnLite™ Management System

Centralized Order Routing

See the stage and status of all orders, across all locations. Easily manage your workload all through one system.

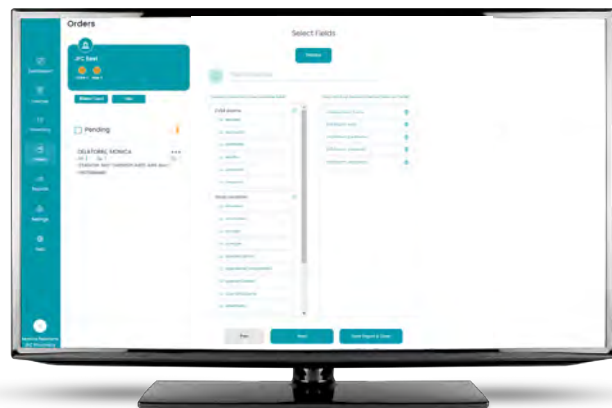

Enterprise-Wide Action-Based Dashboards

Gain visibility into all devices and locations from a single system. Live analytics with one click resolution paths are focused on increasing production and efficiency.

Full Control of Data

Our on-the-fly reports creator and editor gives you control of your operations data. You can manage the data from all devices as needed and create the reports you need to run your pharmacy.
